29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate critical resources needs identified above to the Incident Action Plan.

24 hours:

72 hours:

48 hours: Engine strike teams

Deep organic soils continue to burn due to long term drying. Many fire danger indices

are at extreme levels (Ignition Component-IC and Energy Release Component -ERC) with others setting new maximums (Spread Component-SC, Burning Index-BI and Keech-Byrum Drought Index-KBDI) for the day. Fuel moistures are also at extremely low levels. Very high heat causing firefighter safety issues.

30: Observed Weather for Current Operational Period Peak Gusts (mph): **10** Max. Temperature: **98** 

Wind Direction: S Min.

Relative Humidity: 42

31: Fuels/Materials Involved: **4 Chaparral (6 Feet)** 

Pocosin fuels. Also fuel model 7-Southern Rough

32: Today's observed fire behavior (leave blank for non-fire events):

Significant re-burn and torching in re-burn areas. Significat burning of organic soil continues. Smoldering and creeping continues.

33: Significant events today (closures, evacuations, significant progress made, etc.):

The northern sections of the fire are receiving some rainfall currently.

34: Forecasted Weather for next Operational 36: Projected Final 35: Estimated 37: Estimated Final Wind Speed (mph): **10** Temperature: **99** Size: Control Cost: Date and Time: Wind Direction: S Relative Humidity: Unknown

38: Actions planned for next operational period:

Continue to strengthen control lines on southern perimeter. Continue mop-up and patrol of all lines. Continue rehabilitation of lines in places where fire is not a threat to escape.

- 39: For fire incidents, describe resistance to control in terms of:
- 1. Growth Potential High
- 2. Difficulty of Terrain High

40: Given the current constraints, when will the chosen management strategy succeed?
